We have decided to do an app for The Ministry Of Transport And Works. In events where damages have occurred to infrastructure and buildings Transport and Works need to immediately record the damage done, this can be difficult especially at night when they are called to view the damage. In the event that a large sum of buildings have been damaged they would not have enough time to measure each and every building. The app we are creating will therefore help to assist this department. The app will allow the workers to enter the name, location, damage done, contact and forms of the affected persons. This data would then be sent to one data base where the data can then be processed and the damage done can be taken care of sooner. We have spoken to the ministry of Transport and Works and have their approval for creating this app to help with their work by making it easier and quick.

We as Vincentians have been affected by natural disasters in the past and have had slow replies on the fixing of our infrastructure and buildings. This app will be created to ensure that information is recorded on time and the matters are dealt with immediately.

Sincerely yours,
 Inspire
