

Tag line: get online; get it quick resist the rush and all the fuss!!

Have you ever been to customs to clear one or two small items? Were you frustrated?

There are a number of things I dislike about customs and I know you dislike them too: for instance

1. Standing in lines
2. Not being sure if the item has arrived in the country
3. There is a lot of paper work and going back and forth between customs and different offices.
4. Thinking that I have walked with enough money only to realize that I don't have enough and I have to go for more money.
5. Or to finally realize that it would have been cheaper for me to buy it here.

This is an enormous problem affecting individuals within the government sector in which individual's items can move faster from their required destination to port and customs where we offer mobile and online registration to speed up the process.

To solve the problems listed above, we as the Young Inventors hope to implement a website in which you can be alerted when your goods have entered the country .What we are suggesting is a way to provide an online database where customers are able to gather information about the items that they are going to bring in, the restriction they have on them, and the paper work they are going to need to get the items out. They will need freights or a custom calculator that will calculate the amount that you would pay when these items arrive. This innovative idea will calculate the price of the item that the individual purchased and the amount of money that has to be paid when you go to port and customs. We are also suggesting a registration form so we can register the items that we are going to bring in so whenever these items are scanned in at arrival an alert will be sent to your email to let you know that the customs has received your item. This works in a way where you are able to get your goods right away without a rush and also any fuss.

Some advantages are saving time, bringing money to the government, more people ordering products, greater efficiency, quick and easy calculation of your freight cost.
